Adnan Rafique

Senior Consultant Engineer

7 Years of Experience

Highly skilled Senior Consultant Engineer with a proven track record of delivering successful technology solutions. Strong analytical and leadership abilities to drive projects to completion within budget and timeline constraints. Expertise in providing strategic recommendations and leading cross-functional teams.

Experience

Dec 2020 – Present

Samaritan Technologies Pvt. Ltd

Senior Consultant Engineer

Managed multiple projects and worked with multiple teams at the same time. My responsibilities varied from gathering requirements from clients to plan and execute the development of projects.

Apr 2020 – Dec 2020

Alivia Analytics

Senior Angular Developer

I joined Alivia Analytics when their only Angular developer had left the product incomplete. The project was already delayed and just in one month I was able to make the product stable. I worked on that product for 9 months and completed it.

Nov 2018 – Apr 2020

EDTech Worx

Full Stack Developer

At EDTech Worx my responsibilities included building APIs in Python Django and consuming those APIs in Frontend. I worked on two Portals of an Online Education platform with loads of features. Both Portals were started from scratch by me and later the team expanded to 5 technical members.

May 2017 – Oct 2018

Samaritan Technologies Pvt. Ltd

Full Stack Developer

I Worked on different projects using Python Django, Vuejs, Angular, Reactjs. I was part of multiple teams working on different projects in different technologies.

Nov 2016 – Apr 2017

Hashe Computer Solutions

Junior Full Stack Developer

Started my professional journey at Hashe Computer Solutions as PHP intern and later moved to Angular. I maintained multiple portals built in core PHP for dentists and later revamped those portals using Angular. I also worked with PHP frameworks like Laravel and CodeIgniter.

Projects

Zone Healthy

Lead the team of two people to build and maintain this application using Angular 11. This application is about selecting meal plans and ordering scheduled food for any period of time. This application is live and currently being used by people.

Environment: Angular 11, Bootstrap, Angular Bootstrap

[Link to the system](#)

Wholesome2Go

This application was a kind of clone of Zone Healthy with a few different functionalities. It had a different design than Zone Healthy and was built using Angular 11 as well.

Environment: Angular 11, Bootstrap, Angular Bootstrap

[Link to the system](#)

Sporact

Led a team of 6 people to assist in building new features in this application using Vuejs and Python Django. This application is related to cyber security services and is being used for security risk management.

Environment: Vuejs, Python Django, Element UI, Django rest framework

[Link to the system](#)

Cyberal

Worked with a team of 6 people to assist in building new features in this application using Vuejs and Python Django. This application is related to cyber security as well as Sporact but it was being used for different security purposes

Environment: Vuejs, Python Django, Element UI, Django rest framework

Oprovi

Led a team of 4 people to build this application from scratch using Angular 11 and Python Django. This application is kind of a freelancing platform but specific to only a few services like content reviews and feedback. It is currently in development.

Environment: Angular 11, Python Django, Django rest framework, Annotorious

[Link to the system](#)

Budget Lab

Managed a team of 4 people to build this application from scratch using ReactJs with Tailwind and Python Django on the backend. This application uses APIs Exact Online and help the companies to manage their budgets.

Environment: ReactJs, Tailwind, Python Django, Django rest framework, Postgresql, ExactOnline
